# JustMONTAGE

"JustMONTAGE allows us to combine different types of files (PDF, EMF, TIFF) to build the final output string and convert to CGM format. Using this module made our report processing more efficient, which reduces our project cost."

Engineering Manager, Superior Energy Services

Create well log reports and posters of any size, easily and intuitively, with JustMONTAGE

Image Data Management

Well-log reports

Different documents can be brought into **JustMONTAGE**, joined together seamlessly to create Well-log reports.

The SES example on the right has been created through a header printed from a Scientific Data Warrior file, Analysis Comments from a Word file, Log of events an Excel file, Profile Table an Excel file, Profile Graph from a Kappa Emeraude file, Reduced Curves Log Copy and Mult-Curve Log from Geosoftware Powerlog files and the RIH Log and Toolstring from SDS Warrior files.

Posters

JustMONTAGE is Justcroft International's friendly and easy-to-use composer application. **JustMONTAGE** provides composition functionality to allow the presentation of images in combination with graphical shapes on a single output surface.

Layers

Layers are supported and these are preserved if the composition is exported to a PDF file. Where appropriate, CGM seismic extensions are retained in the resulting composition.

PowerPoint

The composition can be exported directly into PowerPoint if the Export to PowerPoint module is available.

Advanced text

You can insert any type of text with multiple fonts, colours and formats.

Well Log Symbols

The symbols toolbox can be used to put TrueType font symbols on your canvas.

Call outs

Call outs with round corners, transparent background and shadows are available.
